SUMMARY

Flutter developer with ~4 years shipping cross-platform apps for Android and iOS, with three apps live on both the App Store and Google Play. Core contributor on DubiCars (UAE auto marketplace, 500K+ active users): built features on Clean Architecture, integrated Firebase and a Mixpanel/CleverTap/GA4 analytics stack, and helped lift the store rating from 3.7 to 4.6. Works in Agile sprints across the full mobile lifecycle — state management, REST integration, push notifications, testing, and CI/CD. MS in Data Science with published NLP research.

SKILLS

Expert — Dart, Flutter, Clean Architecture, MVVM, Bloc, Riverpod, Provider

Proficient — REST APIs, Firebase (Auth, Remote Config, Cloud Messaging, Crashlytics), Unit & Widget Testing, Async & Reactive Programming (Streams, Futures), Git, CI/CD, Fastlane, GitHub Actions, Agile/Scrum

Analytics — Mixpanel, CleverTap (in-app popups & push), GA4 (Google Analytics), event tracking

Tooling — Android Studio, Xcode, Postman, App Store Connect, Flutter Web, TFLite, CoreML

Also — Python, NLP/ML (BERT, Transformers, scikit-learn) from research background

EXPERIENCE

Software Engineer – Flutter — *DubiCars FZCO (UAE auto marketplace)*

Sep 2023 – Present · Islamabad, PK — [Play Store](#) · [App Store](#)

- Shipped end-to-end features across the Android and iOS app in Agile sprints for a marketplace of 500K+ active users.
- Rebuilt the home-page and dealer-listing modules on Clean Architecture, cutting load times ~25% and isolating business logic for unit testing.
- Wrote unit and widget tests for the home-page and dealer-listing features, catching regressions before release.
- Integrated Firebase Auth, Remote Config, Cloud Messaging, and Crashlytics — adding secure login, server-controlled feature flags, and real-time crash reporting.
- Rebuilt the alert system on CleverTap and third-party SDKs to trigger in-app popups and behaviour-based push notifications from user event data.
- Instrumented Mixpanel, CleverTap, and GA4 event tracking, giving product teams funnel and retention data to act on.
- Built an app-wide caching layer that renders cached content on launch, removing every shimmer and loading spinner from the main flows.
- Re-architected the vehicle-listing screen to cut memory use ~30% and keep scrolling smooth over large datasets — contributing to a 3.7 → 4.6 store-rating lift.
- Built an automated PR reviewer and reviewed junior engineers' pull requests, keeping the codebase consistent as the team grew.

Mobile Application Developer — *Connect Ummah (community & rental-services platform · remote)*

Feb 2022 – Sep 2023 · Remote — [Play Store](#) · [App Store](#)

- Established the app's UI architecture and a Clean Architecture MVP that scaled from launch through new feature modules.
- Led Flutter development for a global user base, owning architecture, REST integration, and performance tuning.
- Built a rental-services booking module and dynamic dashboard as core product features.
- Integrated multiple REST APIs with client-side caching and render-tree optimisation, cutting redundant network calls and scroll jank.

Mobile Application Developer — *Softlinks FZCO*

Jun 2022 – Nov 2022 · Islamabad, PK — [Racing Eye – Play Store](#) · [App Store](#)

- Built and published Racing Eye, a Flutter horse-racing analytics app, to the App Store and Google Play.
- Built a reusable Flutter component library that cut boilerplate for new screens.
- Worked with designers and product managers to align UI patterns across the app.

EDUCATION

MS in Data Science *Kohat University of Science & Technology · 2022 – 2024*

Thesis: BERT-GPT Fusion for Accent Classification in English (abstract accepted for publication). Coursework: ML, NLP, Deep Learning, Statistical Modelling, Data Mining.

BS in Computer Science *Kohat University of Science & Technology · 2016 – 2020*

RESEARCH

BERT-GPT Fusion for Accent Classification in English — Institute of Computing, KUST. Adapted text transformers to audio via MFCC features to classify native vs. non-native English speakers; benchmarked multiple models and used LIME/SHAP for explainability. (Authors: F. M. Paracha, Dr. M. Adnan, Dr. M. I. Uddin.)
